Introduction

This list has been updated by the British Psychological Society's Section on Crisis, Disaster and Trauma Psychology, on behalf of the Society's Practice Board, with the aim of helping members quickly find relevant resources to help in their work with those psychologically affected by disasters and other major incidents.

The database includes areas of knowledge relevant to the epidemiology and assessment of psychological reactions to disasters, as well as their ethical, cultural, legal, and research aspects. It also includes material on planning and intervention before, during, and after major incidents.

The database is deliberately selective with the aim of directing members to those resources that in the opinion of the Crisis, Disaster and Trauma Section are likely to be among those that are up to date and as far as possible evidence-based.

The resources represent a starting point for those involved in disaster responding and we hope provide a useful introduction to the many facets of this work.

The Practice Board will be reviewing and updating this database. You can visit the sections website ([with link](#)) for further information and resources.

General

Attachment and Loss in Trauma

Bannister, J. A., Lopez, F. G., Menefee, D. S., Norton, P. J., & Wanner, J. (2018). Military and premilitary trauma, attachment orientations, and posttraumatic stress disorder severity among male and female veterans. *Journal of Traumatic Stress, 31*(4), 558-567
